Rotaract Club of Xiamen University Malaysia

Rotary Club of Kuala Lumpur Dynamics

Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026 (exact MYT cutoff: VERIFY with organizer)

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	Fool's Horizon
Project / Solution Name	FuturePath Intelligence
Name (Leader)	Teh Yu Zhan
Email & Phone (Leader)	tehyuzhan123@gmail.com | 0103097848
University Affiliation(s)	Universiti Tunku Abdul Rahman (UTAR), Kampar Campus
Live Prototype URL	https://futurepath-sdc-2026-public-1.replit.app/
Code Repository URL (public / access granted to judges)	https://github.com/uzhan2024/futurepath-sdc2026-public

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

The public FuturePath Intelligence application is hosted on Replit Autoscale with Python 3.12 and Streamlit 1.66.1. Streamlit session state stores an individual visitor's synthetic exploration inputs, while deterministic Python domain services evaluate explicitly reported skill evidence against synthetic career requirements. The interface offers career matching, confirmed skill gaps, career comparison, and an offline roadmap. Unknown and unreported skills are not treated as confirmed deficiencies, and the system avoids unwarranted scoring with insufficient evidence. Source code is maintained in GitHub. Optional AI provider adapters were developed and tested separately: local Ollama inference and one successful GLM-5.3 API call using sponsor-provided RunPod resources. Public AI advice, external model calls, and CV upload are disabled. This prototype is not linked to live jobs or official occupational demand datasets.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
Python 3.12 / Streamlit 1.66.1	Application/UI and server runtime	Python PSF / Apache-2.0 (verify notices)
NumPy 2.4.6 / pandas 3.0.6	Data structures and processing	BSD-3-Clause (verify)
scikit-learn 1.9.1 / SciPy 1.17.1	Project dependency / data utilities	BSD-3-Clause (verify)
requests 2.34.2	HTTP client supporting research workflows	Apache-2.0 (verify)
55 pinned Python runtime packages	Direct and transitive dependencies; full license inventory in release notices	See THIRD_PARTY_RUNTIME_NOTICES.zip (90 attribution items)

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
RunPod / GLM-5.3 OpenAI-compatible API	One successful bounded development API call; public user requests disabled	Official SDC sponsor-provided resource (team confirmed)
Ollama local inference endpoint	Local development testing only, not an external public API	Local/self-hosted
None	None	None
None	None	None
None	None	None

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit Autoscale	Public English V3 RC2 Streamlit application	Autoscale; region and billing [VERIFY]
GitHub	Public source control repository	Public repository
RunPod	Sponsor-provided inference endpoint tested once	Official SDC sponsor resource; US$25 displayed balance [VERIFY accounting]

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	**Source / Provider**	**Usage (pre-trained / fine-tuned / self-trained)**	**License / Terms**
GLM-5.3	RunPod endpoint / Z.ai model	Pre-trained; one development API test; disabled in public app	[VERIFY model terms]
qwen3.5:4b	Ollama local	Pre-trained, local prototype testing	[VERIFY model terms]
None in public inference	Public V3 RC2	Deterministic scoring only	Not applicable

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	**Source / URL**	**Type (public / private / self-collected / synthetic)**	**License**	**Personal Data? (Y/N)**
Synthetic learner profiles	Project fixtures	Synthetic	Project-owned; verify	N
Synthetic career requirements	Project fixtures	Synthetic	Project-owned; verify	N
O*NET 31.0 — review only	https://www.onetcenter.org/database.html	Public third-party	Licensing/review pending	N
OpenAlex metadata — development	https://openalex.org/	Public metadata	CC0 metadata; verify	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☒ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
OpenAI Codex (version verify)	Code generation/refactoring/testing	Major
ChatGPT / OpenAI (version verify)	Architecture research, document preparation and review	Major
Replit Agent (version not recorded)	Deployment configuration, preview and browser QA	Major

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

AI-generated code, architecture and documents were independently reviewed with source diffs, deterministic business-rule tests, browser acceptance and isolated-session checks. The approved V3 RC2 release has a historical regression result of 491 passed and 1 skipped (paid live API). Release files were checked against exact manifest hashes and third-party attribution. The developer retained responsibility for final claims, functionality, testing and all submitted materials.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☒ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Replit (official SDC sponsor resource — team confirmed)	Hosting platform / project resources	Hosted public Streamlit prototype; actual credit usage [VERIFY]
RunPod (official SDC sponsor resource — team confirmed)	Model API / sponsor credits	GLM-5.3 endpoint called successfully once in development; not enabled for visitors
None declared	No other confirmed sponsor resource	Do not claim mentoring attendance without evidence

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Replit currently hosts the submitted public prototype, but compatible Python hosting could replace it. RunPod was used for a bounded model API test, not for the core career-matching computation. Deterministic career matching and learning roadmaps work without a cloud model. The publicly accessible V3 RC2 intentionally disables AI advice and CV upload pending further safety, cost and privacy review.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The public application lets visitors interact with fictional profiles and supply skill evidence in session state. No permanent account or database storage of those inputs is claimed. No CV upload control is exposed in the public version. The public version does not send skill inputs to RunPod or Ollama. Browser, platform, and hosting access logs may be retained under provider policies; exact retention [VERIFY]. Users should avoid entering real identifying or sensitive information in the demonstration.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

The three synthetic careers and skill requirements are demonstrations, not validated live labour-market data. Deterministic scores represent only the supplied fixture requirements and should not be interpreted as employability predictions. Unknown and unreported inputs are separated from confirmed gaps; inadequate coverage can suppress scoring. AI-generated guidance may hallucinate and depend on provider budgets or uptime; public AI is disabled. CV ingestion is also disabled pending additional reliability, privacy and security evaluation.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- [x] All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- [x] All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- [x] No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- [x] Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- [x] Any use of official SDC sponsor resources has been declared in Section 5.
- [x] The prototype described here is accessible to judges through the links provided in Section 1.
- [x] All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.

ZHAN
